The fusion protein is useful for promoting angiogenesis, wound healing and bone growth. Compositions containing bone growth promoting fusion protein can be used to treat esteoporosis, rheumatoid or osteoarthritis, to improve poor bone healing, to promote implant integration and function of artificial joints and to facilitate bone reconstruction. They can also be used to treat e.g. ulcers, lesions, injuries, burns, trauma, periodontal conditions, lacerations and other conditions. The invention is also useful in protein therapy. The present sequence is human VEGF-A receptor binding domain.
The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFs), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculagenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cell regulatory system. Such disorders include cancers, abnormal angiogenesis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; vascular endothelial growth factor; VEGF-A; vasculogenesis; angiogenesis; blood vessel; cancer; proliferative retinopathy; psoriasis; age-related macular degeneration; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                           Example 4; Page 115; 261pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  នន្តន្តន្តន្ត្
Called human colon cancer antigens, given in AAB53034 to AAB54006. The called human colon cancer antigens, given in AAB53034 to AAB54006. The chuman colon cancer antigens can have cytostatic, cardioactive, muscular; chuman colon cancer antigens can have cytostatic, cardioactive, muscular; chuman colon cancer antigens can have cytostatic, gastrointestinal.

CC uninerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polymucleotides, and come be used in diagnosis of colon disorders, such as colon cancer. The color cancer and antibadies to the protesins are useful for the prevention, comply the colon cancer and as for the protesins and cancer and as phyridisatics and research, such as for colonsome identification, and as hybridisation probes. The protesins come also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, infectious consistent and disorders, wounds, reproductive disorders, infectious consistent and cardiovascular disorders. AAC98764 to AAC98772 and canders used in the exemplification of the present consistent and cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SXS
          The present invention relates to polypeptides that bind cellular CC receptors for vascular endothelial growth factors (VEGFS), the polypeutides encoding them, and their use for identifying agents that commodulate interactions between VEGFs and their receptors. VEGFs and their receptors. The process of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from the engiogenesis, the process of interactions between VEGF and its creeptors may be used to treat dysfunction of the endothelial cell cregulatory system. Such disorders include cancers, abnormal angiogenesis, the development of cregulatory system. Such disorders include cancers, abnormal angiogenesis, cregulatory system. Such disorders include cancers, abnormal angiogenesis, cregulatory system. Such disorders include cancers, abnormal angiogenesis, creceptor binding profiles compared to known naturally occurring VEGFs. The present sequence represents the polypeptide encoded by human creation of the present sequence represents the polypeptide encoded by human creation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                        The present invention relates to polypeptides that bind cellular creceptors for vascular endothelial growth factors (VEGFs), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cells regulatory system. Such disorders include cancers, abnormal angiogenesis, proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally occurring VEGFs. The present sequence represents the polypeptide encoded by human very very contract clone 12-5.

                        The present sequence represents native human vascular endothelial growth (CC factor (VEGF) 110. VEGF is an angiogenic factor. VEGF proteins are used for the prevention or repair of injury to blood vessels or associated cc nonvascular tissues (served by the blood vessels) and for the prevention are used for the prevention and treatment of this methods may also be used for the prevention and treatment of kidney diseases associated with injury to, or atrophy of, the vasculature of the glomerulus and conterstitium. Conditions which may be treated include haemolytic uremic syndrome, toxic shock syndrome, venom exposure, chemical exposure, thrombosis, preclampsia, thrombotic thrombocytopenia purpura, disseminated intravascular coagulable states, platelet activation or aggregation, thrombosis, preclampsia, thrombotic thrombocytopenia purpura, disseminated intravascular coagulation, sepsis, pancreatis, acute renal fallure, myocardial infarction, ischemic bowel disease, transient ischemic condothalium injury, acute respiratory distress syndrome, toxic alveolar condothalium injury, acute respiratory distress syndrome, toxic acute condothalium injury condothalium injur
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ន្តន្តន្ត
                      CC Administering vascular endothelial growth factor (VGEF) can be used for treating hypertension (especially salt-dependent hypertension) CA Administration of VGEF promotes angiogenesis and/or vascular or CC capillary permeability. The method is also useful in treating CC disorders related to abnormal transport of solutes across endothelial CC cells. Such disorders include the treatment or prevention of solutes; CC disease associated with impaired filtration or excretion of solutes; CC the treatment or prevention of diseases of the central nervous system associated with alterations in cerebrospinal fluid, e.g. stroke, CC meningitis, tumour, infections, and bone growth disorders; treatment or prevention of hypoxia or hypercapnia or fibrosis arising from CC accumulation of fluid secretions in the lungs, e.g. acute respiratory CC distress syndrome, toxic alveolar injury, pneumonia, infections, CC surgical intervention, cystic fibrosis; treatment or prevention of gulmonary dysfunction arising from injury to the pulmonary endothelium, including disorders arising from premature birth, and CC pulmonary hypertension; treatment or prevention of disease arising from disordered transport of fluid and solutes across the intestinal of caretions of acrieves the inflammatory bowel disease, discretions the intestinal of caretions of acrieves the intestinal of the pulmonary treatment or caretions of acrieves the intestinal of the pulmonary treatment or caretions of acrieves the intestinal of the pulmonary treatment or caretions of disease, treatment or caretions of acrieves the intestinal caretions in the pulmonary treatment or caretions of acrieves the intestinal of the pulmonary hypertension; treatment or prevention of disease, treatment or caretions of acrieves the intestinal caretions of the pulmonary hypertension; treatment or prevention of disease, treatment or caretions of acrieves the intestinal caretions of the pulmonary hypertension; treatment or prevention of disease treatment or caretions of the pulmonary hypertensi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                             The present sequence represents vascular endothelial growth factor (VEGF). The specification describes peptides which bind to an anti-VEGF antibody or which bind to a kinase domain receptor (DR). The peptides inhibit the binding of VEGF to KDR, and inhibit binding of anti-VEGF antibody to VEGF. The peptides are useful for inhibiting angiogenesis and for treating diseases including cancer, diabetic retinopathy, psoriasis, hemangioblastoma, and Kaposi's sarcoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           organ allografts; and treatment of cardiac valve disease. This sequence is the native human vascular endothelial growth factor hVGEF110. The activity of VGEF is mediated by interaction with specific receptors on target tissues, most notably the vasculendothelium. VGEF exists as five different length monomer chains to alternative splicing of the VGEF RNA transcript.

Enhancing biological activity of vascular endothelial growth factor by replacing a Cys residue, for producing variant useful for treating hypertension, stroke, diabetes, lupus, glomerulonephritis, meningitis, pneumonia, infections -

Disclosure; Fig 12; 62pp; English.

uraemic syndrome (HUS) or microvascular angiopathy such as thrombotic microangiopathy (PWA). The VEGF variant is also useful for treatment of essential hypertension in a patient. The variant is useful for treating coronary artery disease and/or peripheral arterial disease, to foster myocardial blood vessel growth and to improve blood flow to the heart. It is useful for the treatment and prevention of kidney diseases associated with injury to, or atrophy of, the vasculature of the glomerulus and content in the treatment and prevention of acute renal failure, myocardial infarction, ischaemic bowel disease, transient ischaemic attacks, stroke, hypoxia, hyporcapnia, focal glomeruloselerosis, amyloidosis, glomerulonephritis, diabetes, systemic lupus erythematosus or chronic hypoxia/atrophy. It is also useful in the preservation or cenhancement of function of organ allografts and xenografts, and for treating disorders related to abnormal transport of solutes across endothelial cells such as meningitis, tumour, infections, disorders of condothelial cells such as meningitis, tumour, infections, disorders of turcia language. The present sequence is given in a specification relating to a method for enhancing the biological activity of a vascular endothelial growth factor (VEGF) originally having a cysteine residue at a position 116 of the 121 amino acid native mature human VEGF. The method comprises eliminating the cysteine residue to produce a VEGF variant. The variant is useful for inducing angiogenesis or vascular remodelling, for prevention or repair of injury to blood vessels, where injury is associated with haemolytic bone growth, acute respiratory distress syndrome, toxic alveolar injury, pneumonia, cystic fibrosis, inflammatory bowel disease, infectious ဝူ cardiac

RESULT 11
by administering a VEGF in an amount effective to reduce the blood of pressure of a salt-sensitive hypertension patient to a normal crange. The VEGF is preferably hVEGF121 (see AB87629) or a VEGF chat has had its heparin-binding domain modified to render it incapable of binding heparin, e.g. by amino acid alteration. VEGF110 is not one of the preferred VEGF molecules. The method can consider the constant of the preferred VEGF molecules. The method can constant of the constant of the preferred vegF molecules. The method can constant of the constant of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        hypertension; hypotensive; nephrotropic; cerebroprotective; antibacterial; cytostatic; antialcholic; virucide; vasotro antidiarrhoeic; immunosuppressive; cardiant; antiinflammato

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                  the protein in circulation, whereas hBEGF165 binds heparin strongly. The product can be used for angiogenesis and re-endothelialisation of inner vascular surfaces in wound healing, e.g. treatment of full-thickness wounds such as dermal ulcers, venous ulcers and diabetic ulcers, burns, in surgery, in balloon angioplasty and for the in vitro culturing of endothelial cells. Hybrid growth factors of pDGF and VEGF can exhibit a mitogenic profile between each factor and can be used for wound healing or as inhibitors of angiogenesis for e.g. preventing the growth of tumours.

VEGF analogues in which CYS residues are substd. are more stable. See also AAQ10791-93; AAQ10796-97; AAQ10806-08 and AAQ11099.

                                                                                           The sequence of AAQ44260 contains an open reading frame corresponding to the 165 amino acid human vascular endothelial cell growth factor (hVEGF-165, see AAR38921). Alternate splicing of the sequence gives a shorter coding sequence which encodes the 121 amino acid hVEGF (see AAR42607). The full-length coding sequences can be generated using PCR with human foetal vascular smooth muscle
                                                                    be generated using PCR wpoly-A+ RNA as template. (Updated on 25-MAR-2003

                                                                                                                                                                                                                                                                                                                             A vaccine for treatment and prevention of diseases caused by vascularisation comprising a cell growth factor or its fragments which stimulate vascular cell proliferation is provided. The vaccine can be used for treating cancers, glaucoma, eye tumours, trachoma, psoriasis, granuloma, hypertrophic scars, post-crystalline fibrosis and senile disk muscular degeneration. A preferred protein for use in the vaccine is human VEGF/VPF121,
          Vascular permeability factor; growth factor; overlapping peptide; monoclonal antibody; hybridoma; cancer.

                                                                                                                                                        This is the amino acid sequence of the vascular permeability factor (VPF), a member of the growth factor family. Several VPF types are known having 121, 165, 189 or 206 amino acids. This sequence was used to generate a series of overlapping peptides having 10 residues which were used to raise antibodies against the VPF peptide. The two peptides AAW03678-9 generated the greatest antibody signal against the VPF protein. These clones were used to manufacture hybridomas producing monoclonal antibodies which are useful for diagnosis and treatment of
                                                                                                                                                                                                                                                                                                                        New peptide, useful as antigen for preparing vascular permeability factor monoclonal antibody - is used in treatment agent for cancers and as biochemical reagents

Patent No. 6506884
GENERAL INFORMATION:
APPLICANT: MINTZ, List et al.
TITLE OF INVENTION: NOVEL NUCLEIC ACID AND AMINO ACID SEQUENCES
FILE REFERENCE: 2786-0149P
CURRENT APPLICATION NUMBER: US/09/519,476
CURRENT FILING DATE: 1090-03-09
PRIOR APPLICATION NUMBER: IL128852
PRIOR PLING DATE: 1999-03-05
RUMBER OF SEQ ID NOS: 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SOFTWARE: PatentIn version 3.1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                               Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               seq length: 0

APPLICANT:

APPLICANT:

Sequence 17, Application US/09822270 Patent No. US20020068697A1

SOFTWARE: PatentIn version 3.1 SEQ ID NO 17

TYPE: ENGTH: PRT

110

FEATURE:
OTHER INFORMATION: SYNTHETIC PEPTIDE ORGANISM: ARTIFICIAL SEQUENCE NUMBER OF SEQ ID NOS: 17

FILE REFERENCE: 205060US0
CURRENT APPLICATION NUMBER: US/09/822,270
CURRENT FILING DATE: 2001-04-02
PRIOR APPLICATION NUMBER: US 60/193,396
PRIOR FILING DATE: 2000-03-31

APPLICANT: VASSAY, ROGER
TITLE OF INVENTION: PEPTIDES BLOCKING VASCULAR ENDOTHELIAL GROWTH FACTOR (VEGF)-MEDIA
TITLE OF INVENTION: ANGIOGENESIS, POLYNUCLEOTIDES ENCODING SAID PEPTIDES AND METHODS
